PRIMARY FEATURES

- USA tooled & assembled—aluminum extrusion (rigid) design
- USA warehousing
- **NEW** Fabric design (Made in N. America) Superior to existing aluminum woven types.
- Internal drive mechanicals more robust than competitive designs
- Adjustable closing height
- Recoil speed adjustment
- 3',4',6' widths are standard builds – up to 78" fabric drop
- **Custom sizes** available
- OEM & field retrofit install
- Anti-microbial treatment on fabric & extrusions
- Magnets on handle rail option
- FOUR year warranty**
- NSF , ETL Certified & Made in USA Certified

Background & Introduction:

The Night Shield brand has long been recognized as an industry leader.

Until now, all night covers were contract manufactured overseas. Like with many products, companies consider using off-shore production as the only means to attain competitive pricing. All products need to be competitive, but at what cost?

There is point in time when product quality, cost of delivery, product lead-time etc. make for a compelling consideration to move the jobs back home. To our knowledge, SET will be the only domestic North American case cover manufacturer within this product quality, features and price point.

NS4 is competitively priced, features new engineering and is not simply an upgrade of the previous platform.

There is no need to worry about the value of the US dollar .vs foreign currency and whether or not the customer is going to see either a price increase or a decrease in quality of the components in the product to offset of the fluctuations of the US dollar.

Primary improvements that were implemented;

- Roll tube 30% larger & wall thickness increased. Stronger than competitive designs.
- NEW fabric design anti-fray & creasing, improved air permeability rating, flame retardant, inhibits bacterial & fungal growth as tested by AATAC M147-2004 process.
- Torsion spring assembly is 45% stronger.
- Anti-Microbial (NSF) approved painting process.
- Stronger backplane to remove any flexing in operation.
- Phoenix, AZ assembly.
 - Improved quality control.
 - Improved lead time.
 - Ability to adapt to OEM requests.
 - Primary Colors are Silver and Black. No up charge for Black

Reduces energy costs by up to

35%

NS4 design has completed & passed continuous operational cycling equivalent to over (10) years of use.
